Extending the Value of Enterprise Data Management

Enterprise Data Management (EDM) is the gold standard for managing master data centrally with business-oriented workflows that facilitate data governance, alignment across enterprise applications, and keeping pace with business changes. An often-overlooked benefit that can be enabled with EDM is the potential value created by using business views of data in EPM while preventing coding errors before they happen in ERP. Leveraging the latest features and functionality in Oracle Cloud ERP and EDM, along with the creativity of Empowered Solutions, customers can substantially reduce manual maintenance effort and greatly improve data quality in a seamless manner.
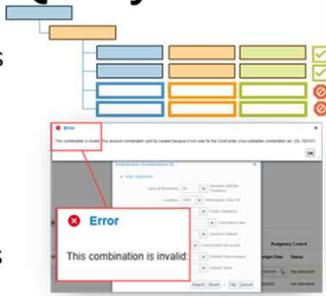

Synchronize Management of GL Segments/Hierarchies with EPM Dimensions

- Align Segment values with Business Views of concatenated segments for Reporting, Planning, and other applications in EPM
- Common use case: merge three GL segments to drive Entity hierarchies (e.g., Cost Centers) for planning and reporting based on Responsibility areas

| GL Segments →			Business View
LOB	**LOC**	**DEPT**	**Cost Centers**
10	2345	6789	10-2345-6789
10	5432	6789	10-5432-6789
20	2345	9876	20-2345-9876

EPM View

Improve Data Quality

- Apply rules to enforce data quality and accounting policies
- Automate creation of Related Value Sets (RVS) to filter drop-down inputs
- Automate definition of Cross-Validation Combination Sets (CVCS) based on approved CCs

Error

This combination is invalid

Go Beyond Standard Workflow

- Utilize attributes to cascade updates (e.g., end dating)
- Drive custom processes (e.g., Cost Center ownership)
- Automate notifications of master data changes (e.g., new Cost Centers, closures)

Client Story

NEMOURS CHILDREN'S HEALTH

Challenges
- Manual data governance processes
- Miscoded GL transactions to invalid Cost Centers
- Missing data attributes requiring follow-up

Scope
- Publish ERP/GL segment values from EDM
- Manage business views (including 3-segment Cost Centers) for EPM applications
- Automate CVCS and RVS rule definitions and publish from EDM to ERP
- Attribution to CCs from Users application
- Custom e-mail notifications

Benefits
- Seamless automation across Oracle Cloud applications
- Improved data quality
- Time savings from manual processes
